

Levasil PA45

Colloidal silica

Levasil PA45 is an alkaline, aqueous dispersion of colloidal silica that is approximately 45% solids by weight. The silica dispersion is sodium stabilized and the amorphous silica particles carry a negative surface charge. The silica particles are discrete, have a smooth, spherical shape, and are present in a wide particle size distribution. The physical appearance of the dispersion is a white liquid, slightly more viscous than water. Levasil PA45 is produced primarily for the European market.

CAS number
7631-86-9

Characteristics

Silica	45 wt%
Density	1.37 g/cm ³
Specific surface area	80 m ² /g
pH	9.5
Viscosity	7 cP
Na ₂ O	0.2 wt%

Applications

Levasil PA45 is a specialty product designed primarily for use as an anti-skid and a frictionizer. The product is modified with an organic additive to reduce its adhesion to metals as well as to provide freeze stabilization.

Storage

Levasil PA45 should be transported and stored at a temperature of 5-35°C (40-95°F). This dispersion is freeze stabilized and can be reused after thawing. For bulk storage, the tank should be sealed and constructed of plastic, fiberglass reinforced plastic, or stainless steel. For packaged goods, any translucent packages should be stored out of direct sunlight or bright light. Under recommended conditions, Levasil PA45 has a shelf life of at least twelve months after production. When stored for a longer period of time sedimentation may occur. To ensure optimal product performance we recommend stirring before use. Ensure good hygiene during handling to avoid bacteria contamination.

Packaging and transport

Levasil PA45 is available in bulk and packaged quantities. Bulk shipping and packaging sizes can vary by region.

Safety and handling

Before handling this material, review the corresponding Material Safety Data Sheet. Colloidal silica products are aqueous dispersions of amorphous silica. Colloidal silica is not classified as harmful, but as mildly irritating. Because the products can have a drying effect on the skin, protective gloves should always be used. In case of skin contact, wash the area of contact with plenty of water. The use of safety glasses is always recommended. In case of eye contact, rinse with large amounts of water and seek professional medical advice.
